ready from day one

What's breaking your data pipeline today

Six recurring failures we see across data teams running large-scale web scraping operations.

Silent IP blocks

Block events accumulate without dashboard signals. By the time the team notices, days of bad data are already in the pipeline.

Retries burn budget

Failure rates climb past 40% on protected endpoints. Retries multiply bandwidth, latency, and unit cost.

Black-box traffic

Without endpoint logs or an error taxonomy, retries are guesswork, and SLA misses go unexplained.

Support behind tickets

Tickets wait days because named AMs are reserved for \$50K+ MRR. Mid-market waits in the queue.

Compliance gaps

Auditors ask for IP-sourcing logs, DPAs, and AUPs your provider can't produce. Procurement stalls.

Tier-1 lock-in

Enterprise providers gate reliability behind \$10K+ minimums, 4–8 week sales cycles, and annual contracts.

How Proxy-Seller solves industry's biggest pains

Built specifically to take those six failure modes off your roadmap.

Silent IP blocks	→	Clean, dedicated pools	Traffic runs through a dedicated pool. Endpoint-level logs and a structured error taxonomy give you visibility into every request.
Retries burn budget	→	+20–30% VRR, –20–35% CPVR	Cleaner pools and policy-driven routing convert retries into valid responses. Run a 14-day A/B pilot against your current provider.
Black-box traffic	→	Endpoint-level observability	Structured error taxonomy and exportable endpoint logs. Engineering builds retry logic on real data.
Support behind tickets	→	Named AM + Slack from \$1K MRR	Named engineer, private Slack or Telegram channel. 24h response SLA tracked in your dashboard.
Compliance gaps	→	Audit-ready from day one	ISO 27001 + ISO 9001. GDPR, CCPA, ePrivacy alignment. DPA/SCC ready. 12–24 months of chain-of-custody logs.
Tier-1 lock-in	→	Mid-market terms, enterprise stack	From \$1K MRR, monthly billing, no annual lock-in. POs, Net-15/30, same-day sandbox, 14-day pilot.

Built for data teams at scale

Headquartered in Cyprus, engineering across the EU. 185,000+ clients worldwide run production data workloads on Proxy-Seller infrastructure.

TRUSTED BY ENGINEERING TEAMS AT

220+ LOCATIONS • 12+ YEARS IN PRODUCTION

- ✓ ISO/IEC 27001:2022 certified
- ✓ ISO 9001:2015 certified

Six proxy types built for production

Pick the IP type that fits your business needs. Mix and match across workflows, monitor from one dashboard.

Residential

Clean pools · real-device fingerprint

- ✓ 47M+ consent-based IPs, KYC/KYB sourced
- ✓ ASN/ISP-level targeting, 220+ locations
- ✓ Flexible rotation & sticky sessions

Best for: SERP, ad verification, AI data

ISP

Datacenter speed · residential trust

- ✓ Static residential IPs from real ISPs
- ✓ Unlimited session lifetime
- ✓ Clean ASN allocation

Best for: marketplaces, brand account ops

Mobile 5G/4G

Real-carrier IPs · dynamic rotation

- ✓ Real T-Mobile/Verizon/EU carrier pool
- ✓ Rotation by link and time
- ✓ Stable 80 Mbit/s, real-device fingerprints

Best for: mobile ad verification, brand social

IPv4

High speed · predictable cost

- ✓ Dedicated IPs, no shared traffic
- ✓ Sub-second response
- ✓ Subnet diversity, IP provenance docs

Best for: routine automation, internal QA

IPv6

High volume · low cost

- ✓ Massive pool, IPv6-friendly endpoints
- ✓ Lowest cost per request
- ✓ Same dashboard as IPv4

Best for: bulk crawls, cache fills

Shared Proxies

Lowest entry cost · multi-tenant

- ✓ Multi-tenant pool, instant access
- ✓ Lowest entry price for non-critical workloads
- ✓ Ramp to dedicated pool when ready

Best for: dev, light scraping, prototyping

Performance you can prove in a 14-day pilot

Outcomes from A/B pilots run by mid-market data teams against their previous proxy provider.

+20 – 30%

Valid Response Rate

24/7

Support that cares

220+

Locations

47M+

Residential IPs

50M+

Total IPs in pool

Human support. 24h SLA. From \$1K MRR.

Tier-1 providers reserve named account managers for \$50K+ accounts. We give them to mid-market teams from day one.

Named account manager from \$1K MRR

Your account is paired with the same engineer from day one. Learns your endpoints, sits in your incident channel, responds in hours, not days.

Direct Slack and Telegram access

Private Slack or Telegram channel replaces the ticket portal. 24h response SLA, typical first-response under 15 minutes.

24h response SLA, measured

Response time tracked in your dashboard. If the SLA slips, the breach surfaces automatically and the credit applies without a ticket.

Same-day sandbox, 14-day A/B pilot

Sandbox provisioned the day an NDA is signed. Two weeks later, a side-by-side benchmark on real endpoints, in writing.

PO, Net-15 / Net-30 invoicing

Enterprise terms (POs, Net-15 or Net-30) without an enterprise minimum. Monthly billing, renewal decision each cycle.

DPA, AUP, sourcing docs from day one

Compliance pack issued on day one. 12–24 months of retained logs satisfy customer audits without follow-up.

How data teams collect public data with Proxy-Seller

Five ways data teams use Proxy-Seller in production today.

Ad verification & brand safety

- ✓ Validate delivery and creatives by geo and device
- ✓ Flag IVT and ad misplacements at scale
- ✓ Protect budgets from invalid traffic
- ✓ Real-browser-condition placement checks

Price & marketplace monitoring

- ✓ Track competitor prices across 30+ marketplaces
- ✓ Monitor SKU and variant coverage at city level
- ✓ Detect promotion cadence and stock changes
- ✓ Audit MAP compliance and reseller activity

SEO & SERP at scale

- ✓ Track rankings across 220+ locations
- ✓ Monitor SERP features (AI Overviews, PAA)
- ✓ Verify geo-localized rankings, city level
- ✓ Capture competitor SERP snapshots at scale

AI/LLM data supply

- ✓ Build geo-accurate training datasets
- ✓ Crawl entire sites with stable sessions
- ✓ Avoid cross-pool data contamination
- ✓ Document data provenance for AI audits

Cybersecurity & threat intel

- ✓ Enrich threat feeds from public sources
- ✓ Detect fraud and abuse at scale
- ✓ Run OSINT from geo-restricted sources
- ✓ Monitor brand abuse across 220+ locations

Tamara J.
Principal Technical Product
Manager, Telecommunications

The quality of the services provided, especially the US 5G proxies. I was surprised by the connection reliability, given mobile proxies normally are flaky: for me it was a stable 80MBit/s, more than expected for mobile. Additionally, I want to commend the support team agents for their responsiveness. There's no need ...

Mattie M.
Senior Marketing Manager,
Marketing and Advertising

Best highlight of this service for me: customer assistance team, pool of carriers on mobile LTE proxies plan, crypto payments, fast order processing and transparent prices and plan/proxies info right on the orders form. Speed, traffic limits and prices are specifically showed for each individual carrier and ...

Brad H.
CTO, Information Technology
and Services

The geographic spread! Lots of cities in the US and every other country that I've checked. Their proxy rotation works well enough that our scrapers run overnight without constant babysitting, and the custom time feature is awesome. Setup was pretty straightforward - our data pipelines were up and running within a couple of days. Also good service ...
